June 2004 - BAC Technician Refresher - 16 hours

June 2005 - BAC Technician Refresher - 8 hours

**Practical Experience:**

I have participated in, and conducted several drinking labs in which the affects of alcohol were studied on individuals in a controlled environment.

I have conducted these labs for several defense attorneys as well as prosecuting attorneys and offered them the chance to test any and all substances they thought might affect the results of a breath test. Some of substances tested were, bread, bananas, a penny in the mouth, breath mints, breath strips, mouth wash, Nyquil, beer soaked dental packing, and several other substances, none of which affected the breath test results after the 15 minute observation period was completed.

I have provided training to local wine growers through literature and drinking labs in regards to their responsibility for the public tasting wine at their establishments.

**Current Responsibilities:**

Traffic Law Enforcement

Breath Test Technician

Instruct police officers in the use of the BAC Datamaster by providing basic and refresher classes

Instruct officers in the use of the PBT

Train other technicians

Maintain records that relate to the instruments that I maintain

Provide expert court testimony relating to the BAC Datamaster and CDM instruments

Provide public instruction and demonstrations concerning DUI laws
